

CConcepts (cconcepts.eu) — Redesign Plan & Antigravity Build Prompts

Client: C-Concepts Vertriebs GmbH (Andreas Sauer) — Werbeartikel/promotional products company, Simmern, Germany **Current site:** WordPress, outdated design, no real motion, generic stock-template feel **Goal:** Full rebuild in Next.js (React), scroll-based animations, premium/professional typography, zero "AI slop" look — should feel like a bespoke agency build.

PART 1 — PLAN

1. What's wrong with the current site (use this to justify the rebuild to the client)

- Built on a generic WordPress/Elementor template — no custom layout rhythm, everything is boxed cards on a white background.
- No animation or scroll interaction at all — completely static.
- Stats section ("Jahre Erfahrung", "Mitarbeiter", etc.) shows literal placeholder value "1" instead of real numbers — looks broken/unfinished.
- Typography is default WordPress theme font — no hierarchy, no personality.
- Images are inconsistent sizes/quality, compressed hard (ShortPixel), no consistent art direction or grid.
- No clear visual hierarchy guiding the eye from hero → services → products → trust → contact.
- Mobile experience is just a squeezed desktop layout, not designed separately.
- Slow-feeling despite being a light static-ish site, because of unoptimized WP asset loading.

2. Stack

- **Framework:** Next.js 14 (App Router) + TypeScript
- **Styling:** Tailwind CSS + CSS variables for a small design-token system (colors, spacing, radii)
- **Animation:** Framer Motion (element/page transitions, staggered reveals) + Lenis (smooth scroll) + GSAP ScrollTrigger only if a specific complex scroll-pin effect is needed (e.g. horizontal product scroller)
- **Fonts:** Two-font pairing, self-hosted via `next/font` (no FOUT, no Google Fonts CDN dependency):
 - Display/headings: **Neue Montreal**, **General Sans**, or **Clash Display** (geometric, confident, used by real agencies — avoids the "Inter + Poppins" AI-generated look)

- Body: **Inter** or **General Sans** regular weights
- **Forms:** React Hook Form + server action or API route → email (Resend/Nodemailer) to Andreas/Ralf
- **CMS (optional phase 2):** Sanity or a simple JSON/MDX content layer so the client can edit products/text without touching code
- **Hosting:** Vercel

3. Sitemap (mirrors current structure, cleaned up)

1. **Home** — hero, full-service overview, product highlights, location, stats, testimonials, Remundi feature, Sedex membership, contact CTA
2. **Full-Service** (with 3 sub-sections as tabs or anchor sections instead of separate thin pages): Planung & Beratung · Logistik & Lagerung · Konfektionierung
3. **Werbeartikel-Produkte** — filterable portfolio grid (Konstruktionen, Messeauftritte, Promotion & Events, Werbeaktionen, Streuartikel, Gewinnspiele)
4. **Über Uns**
5. **Kontakt** — form + map + direct contacts (Andreas Sauer, Ralf Weisbrod)

4. Design direction (so it never looks AI-generated)

- Avoid: centered hero + 3 generic icon cards + purple/blue gradient — this is the #1 tell of an AI/template build.
- Use an **asymmetric grid**, real photography from the client (retro coffee bike, Remundi grill, Pepsi kicker table, popcorn machine) as **large, full-bleed, color-graded images**, not small rounded thumbnails.
- One accent color pulled from the brand (their current red/orange in the logo) + near-black + off-white — no default Tailwind indigo/purple.
- Custom cursor-following or magnetic buttons on CTAs for a premium feel (subtle, not gimmicky).
- Micro-interactions: number counters that animate on scroll for the stats section (replace the broken "1"s with real figures once client provides them), image parallax on scroll, text reveal (mask/clip-path) on section headings.
- Scroll animations: sections fade/slide in with stagger as user scrolls (Framer Motion `whileInView`), sticky/pinned section for the "Full-Service" 3-step process, horizontal-scroll product showcase strip.

5. Real content already on the current site (reuse this — don't invent new copy)

- **Headline:** "Starke Werbung für Ihr Unternehmen"
- **Sub:** "Wir sind Ihr zuverlässiger Partner für Werbeartikel, Gimmiks, Give-Aways, Erlebnis-Promotion – und deren Konfektionierung..."

- Services: Planung & Beratung · Logistik & Lagerung · Verpackung & Konfektionierung · Full-Service Dienstleistung
- Featured projects/products: Remundi-Scooter (Punica), Kicker-Tisch (Pepsi), Popcorn-Maschine, Retro Coffee-Bike, Skate-Game (Rockstar snowboard), Pepsi Becher, Barrel
- Testimonials: Pepsi Cola (15 years working together), Oasis (12 years, Dekoration & Floristik)
- Sedex membership block (ethics/compliance certification)
- Remundi Grill feature with YouTube video embed
- Address: Siebenbornstraße 26, 56337 Simmern/Westerwald
- Contacts: Andreas Sauer +49 (0) 2630 96379-24 · Ralf Weisbrod +49 (0) 2620 94099-28
- Emails: sauer@cconcepts.de · weisbrod@cconcepts.de
- Partner projects: Remundi-Grill, Wema-Step
- Social: LinkedIn, Xing

6. Build order

1. Design tokens + font setup + base layout (header/footer/nav)
2. Home page static structure (no animation yet) — get sections and content right
3. Add scroll animation layer (Framer Motion + Lenis)
4. Full-Service page, Produkte page (with filtering), Über Uns, Kontakt (with working form)
5. Responsive pass (mobile-first correction)
6. Performance pass (image optimization via `next/image`, font subsetting, Lighthouse check)
7. Deploy preview on Vercel to send to Andreas

PART 2 — PROMPTS FOR ANTIGRAVITY

Use these one at a time, in order. Paste each as its own task. Each prompt assumes it's continuing in the same Next.js project.

Prompt 1 — Project setup

Set up a new Next.js 14 project (App Router, TypeScript, Tailwind CSS) for a premium redesign of a German promotional-products company's website (C-Concepts / cconcepts.eu). Configure next/font with a geometric display font for headings (e.g. Clash Display or General Sans) and Inter for body text, self-hosted, no layout shift. Set up a design-token system in tailwind.config: a near-black (#0E0E0E), an off-white (#F7F5F2), and one accent color (#D63B1F — a warm red/orange from the brand). Install and configure Framer Motion for animations and Lenis for smooth scrolling. Build the base layout: a sticky header with logo placeholder, nav links (Full-Service, Werbeartikel-Produkte, Über Uns, Kontakt), a prominent "Termin vereinbaren" CTA button, and a footer with contact details, address, social links, and legal links (Impressum, Datenschutz, AGB). Keep everything in German. Do not use any default Tailwind purple/indigo — use only the three tokens above plus black/white/gray.

Prompt 2 — Home page structure (no animation yet)

Build the home page content structure for C-Concepts using this real copy and content (do not invent new copy, use what's given, refine only the phrasing where needed for flow):

- Hero: eyebrow "Werbeartikel mit Full-Service", headline "Starke Werbung für Ihr Unternehmen", subtext about being a reliable partner for Werbeartikel, Gimmicks, Give-Aways, Erlebnis-Promotion and Konfektionierung, two CTAs: "Termin vereinbaren" and "Full-Service entdecken"
- Client logos strip: Pepsi, Oasis, Punica, Rockstar, Chio, Lipton (use text/wordmark placeholders for now)
- Three-column Full-Service intro: Full-Service / Produkt-Portfolio / Unser Standort, each with a short line and a "Mehr erfahren" link
- Stats row (animated counters, placeholder numbers to be replaced by client): Jahre Erfahrung, Mitarbeiter, Büro & Lager (m²), Zuverlässig (%)
- Four-step Full-Service section: Planung & Beratung, Logistik & Lagerung, Verpackung & Konfektionierung, Full-Service Dienstleistung — each with a large image and short description
- Featured Projects grid: Remundi-Scooter, Kicker-Tisch für Pepsi, Popcorn-Maschine, Retro Coffee-Bike, Skate-Game, Pepsi Becher, Barrel — large asymmetric image grid, not uniform cards
- Testimonials: quote from Pepsi Cola (15 years partnership), quote from Oasis (12 years, Dekoration & Floristik)
- Remundi feature section: description + embedded YouTube video (<https://www.youtube-nocookie.com/embed/PSMCJBFAtSg>) + link to Remundi Youtube channel
- Sedex membership section: short paragraph about ethical/compliance partnership
- Final CTA band: "Sie haben noch Fragen?" + "Jetzt Termin vereinbaren!" button

Use next/image with placeholder image paths (/images/...) for now. Layout should be asymmetric and editorial, not centered-card-grid.

Prompt 3 — Scroll animation layer

Add scroll-triggered animation to the home page built in the previous step, using Framer Motion's `whileInView` and `Lenis` for smooth scrolling.

Requirements:

- Section headings reveal with a clip-path/mask text animation as they enter the viewport
- Content blocks (text + image pairs) fade up and slightly stagger (image first, text 100ms after)
- The stats row numbers count up from 0 to their target value when the section enters view
- The Featured Projects grid images have a subtle parallax (move slightly slower than scroll) and a soft scale-in on hover
- CTA buttons have a magnetic hover effect (button shifts slightly toward cursor position) and a smooth color transition
- Keep all animations subtle and fast (200-500ms), not slow or bouncy — this should feel premium and restrained, not playful
- Respect `prefers-reduced-motion` and disable non-essential motion for users who have that set

Prompt 4 — Full-Service page

Build the `/full-service-leistungen` page with the four services as either sticky-scroll sections (image pinned, text scrolls past — like an agency case-study page) or a tabbed layout: Planung & Beratung, Logistik & Lagerung, Konfektionierung, Full-Service Dienstleistung. Each service gets its own short section: heading, 2-3 sentence description, one large supporting image, and a "Termin vereinbaren" CTA at the end of the page.

Prompt 5 — Produkte page

Build the `/werbeartikel-produkte` page as a filterable project/product portfolio. Categories: Konstruktionen und Sonderanfertigungen, Messeauftritte, Promotion & Events, Werbeaktionen, Streuartikel & Give Away's, Gewinnspiele & Verlosung. Use the existing project names as sample items (Remundi-Scooter, Kicker-Tisch für Pepsi, Popcorn-Maschine, Retro Coffee-Bike, Skate-Game). Grid should animate items in/out with a smooth layout transition (Framer Motion layout animations) when a filter is selected. Large image-forward cards, minimal text.

Prompt 6 — Über Uns + Kontakt

Build /uber-uns (company story placeholder — leave clear content slots for the client to fill in about their history and team) and /kontakt with:

- A contact form (Name, E-Mail, Telefon, Nachricht) using React Hook Form with validation, submitting to an API route that sends the message via email (Resend) to sauer@cconcepts.de and weisbrod@cconcepts.de
- Direct contact block: Andreas Sauer +49 (0) 2630 96379-24, Ralf Weisbrod +49 (0) 2620 94099-28
- Address block: Siebenbornstraße 26, 56337 Simmern/Westerwald, with an embedded map (Google Maps iframe or a static map component)
- Success/error states on form submit with a subtle animated confirmation

Prompt 7 — Responsive + performance pass

Do a full responsive audit of every page built so far (mobile, tablet, desktop breakpoints). Ensure the asymmetric grids collapse to a clean single-column flow on mobile without losing the editorial feel — don't just shrink desktop layout. Then do a performance pass: convert all images to next/image with proper sizes/priority props, check font loading has no layout shift, lazy-load below-the-fold sections, and confirm Lighthouse performance/accessibility scores are 90+.

Notes

- Replace all `/images/...` placeholders with the client's real photography once Andreas provides high-res versions — current site images are compressed and low-res, worth asking for originals.
- The stats section ("Jahre Erfahrung", "Mitarbeiter", etc.) currently shows literal "1" on the live site — get real numbers from the client before launch, don't ship placeholders.
- Keep every prompt's output in German (site language) unless told otherwise.
